

Water and Wastewater Solutions from Panametrics

Measurement solutions for
water and wastewater

Flow

Clamp on flow meters

Panametrics AquaTrans™
AT600
ultrasonic flow meter

Handle most of your water and water treatment flow applications with ease. Clamp them onto existing pipes without shutting down your process.

Panametrics TransPort® PT900 **portable flow meter**

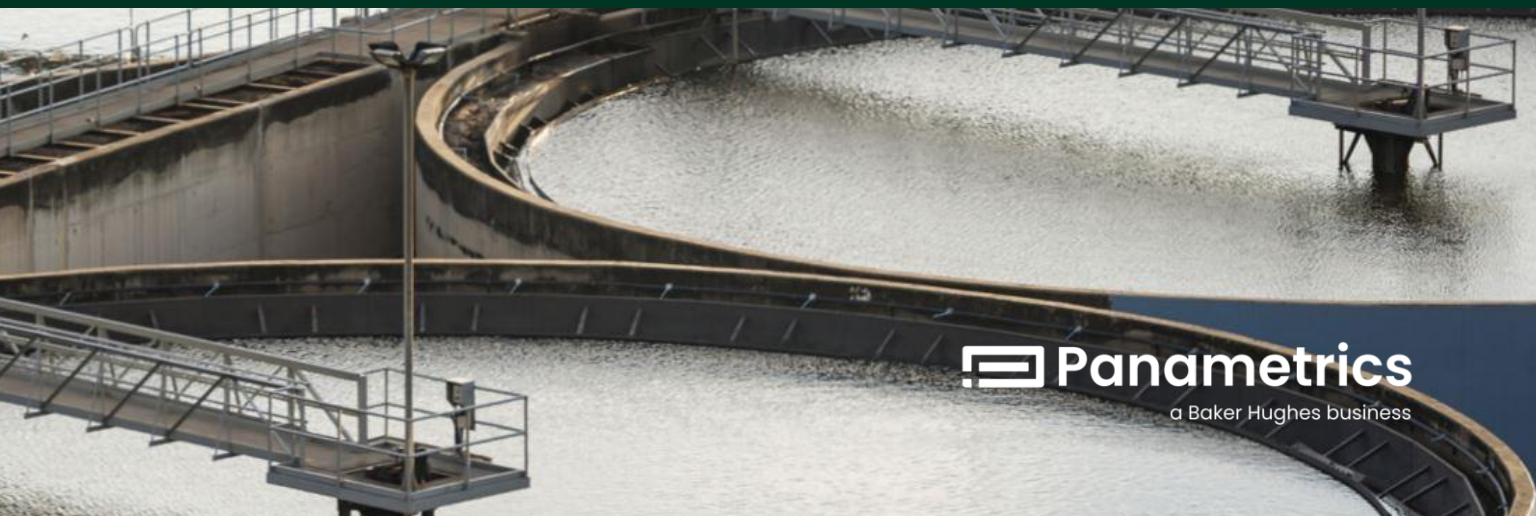

Helps you do surveys or check unreliable meters throughout your plant. The path of water and wastewater defines when and where to establish flow measurement points. Operators strongly recommend that users allow a continuous flow and install flow meters from outside the pipes.

Gas Gas Analyzer

Panametrics XMO2 Thermoparamagnetic oxygen transmitter

Reliably monitor oxygen in the headspace of the digester tank to ensure micro-organism health for efficient aerobic digestion.

Panametrics XMTC

Thermal Conductivity based gas analyzer

Measure the digester gas Methane content with the Panametrics XMTC gas analyzer, to ensure optimal fuel quality.

With long-term calibration stability and no moving parts to require expensive maintenance, these Panametrics analyzers are cost-effective solutions to your gas analysis needs.
